

Thickness of neoprene pants and jacket:

Neoprene type (sheico, Yamamoto...): Heiwa SK is the wetsuit we sent but we can offer Sheico, Heiwa, Yamamoto and Daiwabo neoprene, depends of the customer needs and preferences.

Internal neoprene:

External lining (Nylon, dacron...): Smooth skin

Differentiated thickness of neoprene patches on body, face, where?): Chest reinforcement (loading pad) is 7mm extra smooth skin neoprene. All other places are 7mm

Folded neoprene:

Sternal protection (thickness of the eventual additional pad and material of external cover when present): Knees and elbow protectors are made of Supratex and built-in the suit, not on the suit. Also, loading pad could be made on same way on customer request.

Elbows and knees protection (material of eventual cover): Supratex

Back and underarm:

Neoprene of lower jacket:

Beaver tail closure:

Waist height:

Seams on chin:

Camouflage:

Elastic band for trousers:

Jacket and trousers purchasable separately (yes or no?): Yes

Available thicknesses: 3mm, 5mm, 7mm, 8mm

Special solutions (point out the key strong and particular characteristics of the wetsuit): It is made by measures and it will perfectly cover the diver body and stop any fluctuation of the water inside the wetsuit. We always produce wetsuits for known customer and we don't keep the stock because our business policy is to provide fresh neoprene for our customers. Subcraft cutting scheme is "alive". All the time we are improving details to make it best possible.
